

Different from the start.

Cardiac device management is fragmented—across vendors, data streams, and manual processes. Most platforms try to simply reduce the noise and offer vague promises of “improved efficiency.” **Murj is different.**

Designed for continuity in a fragmented system

Inefficiency is a symptom of a larger problem: scattered data and disconnected workflows. Murj addresses the root issue by restoring continuity across patients, documentation, and revenue—enabling teams to focus on care, not the process.

Clinical clarity and context: Provides the full patient story within the workflow, enabling confident decisions.

Embedded operational and financial accuracy: Built-in interval tracking and billing integrity ensure nothing is missed and revenue is fully captured.

A trusted growth partner: Enterprise support and clinical services extend team capacity to sustain quality as volume and complexity grow.

The Murj commitment

Empowering the people behind the care.

We built Murj not just to process data, but to bring clarity, relief, and confidence back to cardiac device care. Today, we're proud to support 1,180+ healthcare sites across the country. But what matters most is that our purpose hasn't changed. We're here to serve you, your teams, and your patients. And we'll never compromise on that. Because our excellence is always in service of yours.

Todd Butka, Founder and CEO

Real-world impact

Efficiency happens when data, clinical decision-making, and revenue are finally aligned. Murj helps clinics scale by ensuring nothing gets missed and every action is captured. When this continuity is achieved, significant results follow.

University of South Florida

4,000 patients

Murj customer since February 2023

- **67 percent increase** in patient volume without adding staff
- **Doubled remote monitoring revenue**
- **62 percent faster billing cycles** through automated workflows

Deborah Heart and Lung Center

3,800 patients

Murj customer since October 2023

- **44 percent increase** in patient volume without additional staff
- **33 percent reduction** in remote monitoring workload
- **\$663K in new revenue** from streamlined operations and monitoring programs
